

The Reserve System — Brand Palette

Derived from the live website and applied consistently across the website, both reader PDFs, and the Reserve Review page. All pairings meet WCAG AA.

Token	Hex	Use
Navy	#0C2B4F	Primary dark. Backgrounds, headings on cream.
Cream	#F7F2E9	Primary light background.
Gold	#C9A55E	Buttons and accents on navy . Matches site CTA fill.
Gold Deep	#886827	Small text, rules, and eyebrows on cream . Darker so it passes contrast; do not use #C9A55E for small text on cream — it fails AA.
Gold Light	#DAC499	Logo mark and light accents on navy.
Navy Line	#324B68	Hairlines and input borders on navy.
Navy Muted	#8994A1	Secondary and disclaimer text on navy.

Contrast (WCAG AA: 4.5 body text, 3.0 large text / UI)

Pairing	Ratio	Needs	
Navy text on cream	12.78:1	4.5	PASS
Gold Deep small text on cream	4.66:1	4.5	PASS
Gold button fill on navy	6.12:1	3.0	PASS
Navy label on gold button	6.12:1	4.5	PASS
Cream text on navy	12.78:1	4.5	PASS
Gold Light accent on navy	8.39:1	3.0	PASS

Navy Muted text on navy	4.64:1	4.5	PASS
-------------------------	--------	-----	------

Logo files — vector

All three are true vector (single path, no embedded raster), 1254×1254 viewBox. Sharp at any size. 92KB each, ~28KB gzipped — enable gzip/brotli on the server.

File	Fill	Use
<code>mark.svg</code>	<code>currentColor</code>	Preferred for web. Inherits colour from CSS, so one file serves every context. Set <code>color:</code> on the parent or the <code><svg></code> element.
<code>mark_gold.svg</code>	<code>#886827</code>	Fixed Gold Deep. Cream/white backgrounds.
<code>mark_light.svg</code>	<code>#DAC499</code>	Fixed Gold Light. Navy backgrounds.

The PNG versions are retired — use these instead.

Both reader PDFs now embed the SVG rather than a raster, which cut their file size roughly 40% and makes the mark sharp at any zoom level.
